The **Desktop Analog Clock Project Guide Document** is a detailed instruction manual that makes it simple for you to use, explore, and comprehend this project.

Regardless of your level of experience, reviewing or altering this project is fairly simple if you have a basic understanding of HTML, CSS, and JavaScript programming language.

The following three sections, or portions, are part of this project:

1. Manual Time Setting Buttons
2. Current Device Time Button
3. Reload or Refresh Clock Button.

Let's give each one a visual introduction;

1. The **Manual Time Setting buttons** part allows you to set the time and day as you like by just clicking either the increase button to increase and rotate the minute stick right or the decrease button to decrease and rotate the minute stick left or just hold the **Enter Key** for fast rotates.
2. The **Current Device Time Button** part allows you to set and access the current device time and day easily with just one click, thanks to the Current Device Time Button component.
3. **Reload or Refresh Clock Button** part that appeared if you clicked the current device time button to disallow you from clicking the time manual setting buttons again.
